## SUMMARY

---

Computer Science Engineering student with strong Data Structures & Algorithms fundamentals and hands-on experience building backend systems, REST APIs, and automation pipelines in Java and Python. Comfortable working across Spring Boot, FastAPI, and relational databases; focused on writing clean, debuggable, production-ready code and owning problems end-to-end rather than waiting to be told the next step.

## EDUCATION

---

### Sri Krishna College of Technology

*B.E. Computer Science Engineering; CGPA: 7.05*

Coimbatore, India

2023 – 2027

### SMBM National Public School

*Higher Secondary Education (HSC); 76.8%*

Dindigul, India

2023

## EXPERIENCE

---

### AccentoTechno Soft

*Python Developer Intern*

Coimbatore, India

May 2024

- Built and shipped a full-stack Python application (Flask backend, Streamlit frontend) that integrated NLP/AI APIs to generate 99+ structured business strategies per user, owning the feature from problem statement through production.
- Designed and automated a document-generation pipeline (PDF/DOCX), replacing a manual formatting workflow and reliably delivering 50+ reports/week to end users.
- Debugged API integration and data-formatting edge cases under real delivery deadlines, cutting manual report-prep time by 10–12 hours/week.

## PROJECTS

---

### Employee Attendance Management System | *Java, Spring Boot, MySQL, REST API*

- Engineered a Spring Boot backend with layered, clean architecture, exposing RESTful APIs for employee and attendance management end-to-end.
- Designed a normalized MySQL relational schema with Spring Data JPA, implementing secure CRUD operations, input validation, and optimized data persistence.

### Topology-Based Stock Analysis System | *Python, FastAPI, React, scikit-learn*

- Architected a React + FastAPI full-stack application, exposing machine learning inference through scalable, modular REST APIs.
- Built an end-to-end data pipeline applying Topological Data Analysis (TDA) and ensemble ML models, with backtesting validated on Nifty 50 market data.

### AI Business Plan Generator | *Python, Streamlit, Grok API*

- Integrated the Grok AI API into a Python service, applying deliberate prompt engineering rather than relying on default model outputs, to reliably generate 99+ tailored business strategies per user.
- Automated PDF/DOCX report-generation workflows, saving users 10–12 hours/week.

## TECHNICAL SKILLS

---

**Languages:** Java, Python, JavaScript, SQL

**Backend & APIs:** Spring Boot, FastAPI, REST API Design, Flask

**Databases & Infra:** MySQL, Docker, AWS, Git/GitHub

**Core Concepts:** Data Structures & Algorithms, System Design, Debugging & Testing, Automation, AI/LLMs, RAG, Prompt Engineering

## COURSES & CERTIFICATIONS

---

- Programming with Java – NPTEL, IIT Kharagpur
- Cloud Computing – NPTEL, IIT Kharagpur
