SUMMARY

Computer Science Engineering student with strong fundamentals in Data Structures & Algorithms and hands-on experience building backend systems and automation pipelines in Java and Python. Demonstrated ability to document technical specifications, participate in software testing, and leverage Generative AI tools (LLMs, Copilots) to enhance delivery and optimize problem-solving approaches. Focused on writing clean, production-ready code in AI-enabled environments.

EDUCATION

Sri Krishna College of Technology

B.E. Computer Science Engineering

SMBM National Public School

Higher Secondary Education

Coimbatore, India

2023 – 2027

Dindigul, India

2023

EXPERIENCE

AccentoTechno Soft

Python Developer Intern

Coimbatore, India

May 2024

- Built and shipped a full-stack Python application (Flask backend, Streamlit frontend) that integrated NLP/AI APIs to generate 99+ structured business strategies per user, leveraging AI-enabled workflows for rapid delivery.
- Designed and automated a document-generation pipeline (PDF/DOCX), replacing a manual formatting workflow and reliably delivering 50+ reports/week to end users.
- Documented business requirements and debugged API integration edge cases under real deadlines, collaborating with cross-functional requirements to cut manual report-prep time by 10–12 hours/week.

PROJECTS

AI-Powered Personal Coding Agent | *Python, Local LLMs, Prompt Engineering*

- Deployed and fine-tuned a local Large Language Model (CodeLlama) connected to a custom web interface to serve as a personal AI programming assistant and copilot.
- Applied practical knowledge of AI prompt engineering to optimize code generation, debugging, and solution development, demonstrating strong learning agility and curiosity in Generative AI.

AI Business Plan Generator | *Python, Streamlit, Grok API*

- Integrated the Grok AI API into a Python service, applying deliberate prompt engineering rather than relying on default model outputs, to reliably generate tailored business strategies.
- Automated report-generation workflows using AI-assisted automation tools, saving users 10–12 hours/week.

Employee Attendance Management System | *Java, Spring Boot, MySQL*

- Engineered a Spring Boot backend with clean architecture, exposing RESTful APIs, and developed technical specifications for data flow and feature enhancement.
- Designed a normalized MySQL schema and actively participated in the testing of new backend features to ensure secure CRUD operations and validated data persistence.

LEADERSHIP & EXTRACURRICULAR

Active Member

Rotaract Club

Communication & Collaboration

- Collaborate with regional and cross-functional student teams to organize community events, adhering to project timelines and execution requirements.
- Contribute ideas and insights during team discussions to enhance project outcomes and problem-solving approaches.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL

AI & Innovation: Generative AI tools (Copilots, Chatbots), Prompt Engineering, LLMs, Automation Tools

Backend & APIs: Spring Boot, FastAPI, REST API Design, Flask

Databases & Infra: MySQL, Docker, AWS, Git/GitHub

Core Competencies: Data Structures & Algorithms, Technical Documentation, Software Testing, Requirement Analysis
